Application/Control Number: 09/780,073

Art Unit: 3727

In view of the Appeal Brief filed on November 25, 2002, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
  - (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, 12-15 and 17-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Carroll ('213)(Carroll).

Carroll discloses a low depth nestable tray which is inherently capable of holding containers, the tray comprises a floor structure with container support areas and a low depth wall structure comprising columns (portions of the outer zig-zag bands which attach the inner zig-zag band to the floor structure) and a band (the annular inner zig-zag band), the band has side and end portions spaced above the floor structure and connected to the floor structure by the columns, the band is contoured downwardly to form a band corner portion that directly connects to the floor structure at each corner of the tray. A rib is formed on the exterior surface of each

Page 3

band corner portion by another portion of the outer zig-zag band near the ends of the zig-zag bands which connects with the band corner portion and a platform is formed on the top edge of each band corner portion. The bands are contoured downwardly at an angle appearing to be 45 degrees which is approximately 50 degrees. The band is contoured downwardly along the side of the tray to form a band side detail connected to the floor structure.

Claims 1-3, 5-7 and 9-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Apps ('925) (Apps).

Apps discloses a low depth nestable tray for containers, said tray having a low depth wall structure comprising a plurality of columns (18) and a band (rail 16 and corner posts 20) having side and end portions spaced above the floor, the corner portion is formed by (posts 20) and wherein the band is contoured downwardly to form a band corner portion that directly connects to the floor structure at each corner of said tray. One vertical edge of the corner post 20 is an end portion of the band the other vertical edge of the corner post is a side portion of the band. A rib (21) is located on the exterior surface of each corner post and a platform is formed at the top edge of each corner post. Individual support columns (18) on the side of the tray can be considered to be part of the band that is contoured downwardly along the side of the tray to form a band side detail that connects to the floor structure at the side of the tray. Each column has an inner column surface which projects inward, and an outer column surface which is recessed inward to receive therein the inner column surface of an adjacent below-nested tray.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

<sup>(</sup>a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3727

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 4

Claims 4 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Apps in view of David.

Apps discloses the invention except for an angle of 50 degrees as the downward contour angle of the band to form band corner portions and the band central portion. David teaches a crate wherein V-shaped structures are used to secure a band to a floor structure, the V-shaped structures have two arms (34, 35). The V-shaped structure show that a side band and a floor structure can be connected securely with an integrally molded V-shaped structure as shown in Fig. 6 where the two arms adjacent the corner, one associated with the end wall and the other associated with the side wall, and other structures are located centrally to the side, connect the band and floor with a downwardly contoured structure where the angle is about 60 degrees which is approximately 50 degrees. It would have been obvious to modify the corner portions and band central portion to have a 50 degree downward contour in order to have a corner portion or central portion which covers a greater peripheral extent of the side wall to keep the contents from slipping out of the container between the band and the floor.

Claims 11, 16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carroll in view of Apps.

Carroll discloses the invention except for the inwardly projecting inner column surface and the corresponding recessed outer surface. Apps teaches columns 18 with inwardly projecting inner surfaces and corresponding recessed outer surfaces. It would have been obvious to replace the columns of Carroll with Apps' columns in order to provide columns with nesting

Art Unit: 3727

structure which restrict movement when in the nested configuration and which assist in aligning the trays when the trays are being nested.

## 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of double patenting over claims 1-13 of U. S. Patent No. 6,186,328 and drawing figures 1-10 of U.S. Patent No. D404,204 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patents.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: A tray for supporting cans comprising a floor structure and a low depth wall structure, the wall structure having a plurality of columns and a band member with side and end portions.

Art Unit: 3727

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
